Summary

I am a software test engineer who has actively taken part in all stages of the testing lifecycle, designing test scenarios and performing both manual and automated testing on web and mobile applications. I have been involved in end-to-end testing processes, including requirement analysis, test design, execution, defect reporting, and validation.

With my background in frontend development, I can thoroughly analyze user interfaces and perform comprehensive UI/UX testing from both functional and visual perspectives. This enables me to create test scenarios that focus on delivering both technical accuracy and a high-quality user experience.

In addition, I actively work with test automation tools such as Selenium, Cucumber, Appium, Postman and I continuously improve my expertise by exploring new technologies and frameworks in the field of automation testing.

Experience

Test Specialist, Sisal Hub Türkiye – İstanbul Jan 2026 – Present

- Analyzed user requirements and functional specification documents obtained during analysis meetings, and designed both positive and negative test scenarios.
- Performed comprehensive manual and automation testing on Milli Piyango web and mobile (iOS/Android) applications, as well as the Gezici Bayi mobile application.
- Conducted functional, regression, smoke, UI and API tests across various devices and test environments.
- Reported identified defects in detail and collaborated closely with development teams to follow up on resolution processes.
- Designed and executed API tests using Postman to validate backend processes.
- Documented test results, prepared test reports regularly and coordinated closely with the QA team throughout the test cycle.
- Developed BDD-based test scenarios using automation tools and frameworks such as Selenium, Cucumber, TestNG, Appium and Maven; applied automation testing to both web and mobile applications.

QA Tester Intern, Sisal Hub Türkiye – İstanbul Sep 2024 – Dec 2025

Frontend Developer, Arute Solutions – İstanbul Dec 2023 – Aug 2024

Frontend Developer Intern, Arute Solutions – İstanbul Nov 2023 – Dec 2023

Education

Dogus University, Software Engineering 2020 – 2024

Pendik Anatolian High School 2015 – 2019

Projects

Selenium Cucumber Test Automation Project

- I built a test automation framework using Selenium, Cucumber, TestNG and Maven to perform web application testing in different browsers and environments. I designed BDD scenarios and managed test execution with TestNG and Maven.

Github Link:<https://github.com/Yusufdmrc/selenium-project>

Appium Test Automation Project

- I built a mobile test automation framework using Appium and Java to test Android and iOS apps. I created test scripts, ran them on multiple devices and managed the test flow with TestNG and Maven.

Certificates

ISTQB Foundation Level (CTFL)

Jul 2025

Link:<https://app.diplomasafe.com/en-US/certificates/de97aba5e37f221c0e1c7a6137f6304c466103bfd>

Skills

Languages: Java, JavaScript, SQL

Tools - Frameworks: Selenium, JUnit, TestNG, Cucumber, Appium, Postman, Jenkins, JMeter, Git, Maven

Soft Skills: Team collaboration, Critical thinking, Open to feedback, Time management, Problem solving
